## Innovation comes from outer Space

*The session “Aerospace Related Applications”, in the context of the international conference “NanotechITALY2015”, will devote special attention to technology transfer.*

Space technology is known to improve the quality of life for everyone around the world. Highly innovative products based on it are widespread and used in everyday life; and the technology transfer is increasingly affecting almost all industry sectors. Successfully transferring space technologies to non-space sectors for applications is certainly a challenging and complicated operation; but it is feasible, by means of adequate investment especially in the long-term. This topic will be dealt with in the session “**Aerospace Related Applications**” which will be held on **Wednesday 25<sup>th</sup> November 2015 at 1.45 PM** (hall 215) in the context of the international conference “**NanotechITALY2015**”, Bologna, 25-27 November, Convention Center (via Gobetti, 101) inside the CNR Research Area Campus. Among the speakers: Pierluigi Bellutti, Fondazione Bruno Kessler; Laurent Marchand, European Space Research and Technology Centre, European Space Agency (ESTEC); and Nicola Pugno, University of Trento, Fondazione Bruno Kessler and also scientific and technical committee member of the Italian Space Agency (ASI).
